CONFIDENTIAL — STB CYBERSECURITY

STB Cybersecurity — Vision & Roadmap

Where We're Going: The Future of STBCS

A Letter from the Founder

When we launched STB Cybersecurity, the mission was clear: give small and mid-sized businesses the same threat intelligence that Fortune 500 companies rely on — without the Fortune 500 budget.

Today, STBCS already delivers 134 built-in threat feeds, 18+ security tools, real-time ransomware tracking, and professional services from a team that's personally handled over 1,000 incident response cases. We're proud of where we are, but we're even more excited about where we're going.

This document lays out our vision for the next generation of STBCS — the features, expansions, and capabilities we're building to stay ahead of the threat landscape and continue protecting the businesses that need it most.

— STB Cybersecurity Founding Team

The Opportunity

The Cybersecurity Gap Is Growing

- **43% of cyberattacks** target small businesses, yet only **14%** are prepared to defend themselves (Accenture)
- The average cost of a data breach for SMBs now exceeds **\$150,000** — enough to close many businesses permanently
- **60% of small businesses** that suffer a major cyberattack close within six months
- Ransomware payments have increased **500%** in the last five years
- The global cybersecurity talent shortage has reached **3.5 million unfilled positions**

Why This Matters for STBCS

Every one of these statistics represents a business that needed what we build. Our platform already covers the intelligence and monitoring gap. The roadmap ahead focuses on **closing the remaining gaps** — automation, response, training, and managed services — so our customers never become a statistic.

Roadmap Overview

Phase 1: Foundation Enhancement (Current → Q3 2026)

Deepening the capabilities our users already rely on.

Phase 2: Automation & Intelligence (Q3 2026 → Q1 2027)

Adding AI-driven automation, predictive analytics, and smart alerting.

Phase 3: Managed Services & Scale (Q1 2027 → Q4 2027)

Expanding into managed security services and partner ecosystems.

Phase 4: Industry Leadership (2028+)

Establishing STBCS as the go-to cybersecurity platform for SMBs worldwide.

Phase 1: Foundation Enhancement

Current through Q3 2026

Live Chat Support

Real-time security support built directly into the platform. When a business owner sees something suspicious at 2 AM, they shouldn't have to wait until morning for help. Our live chat system will connect users with security analysts who can provide immediate guidance.

- In-platform messaging with support ticket escalation
- Priority routing for Pro, Business, and Unlimited subscribers
- Chat history preserved for compliance documentation

SMS & Mobile Threat Alerts

Critical threats don't wait for you to check your email. Our SMS alerting system will push high-priority notifications directly to your phone — ransomware activity targeting your industry, critical CVEs affecting your stack, or watchlist matches that need immediate attention.

- Configurable alert thresholds by severity
- Industry-specific threat notifications
- Available for Business and Unlimited tier subscribers

Modular Add-On Marketplace

Not every business needs every feature. Our add-on system will let customers customize their STBCS experience by purchasing individual capabilities on top of their base subscription.

- Additional threat feed packs (industry-specific, regional)
- Premium tool access (advanced forensic analysis, deep OSINT)

- Extended data retention and historical analytics
- Custom report templates and white-label options

Enhanced Email Intelligence

Expanding our email header analyzer into a full email security suite — phishing simulation, DMARC/DKIM/SPF monitoring, and business email compromise (BEC) detection.

- Email authentication health monitoring
- Phishing simulation campaigns for employee training
- Real-time BEC pattern detection
- Monthly email security posture reports

Advanced Search & Filtering

Power users and security analysts need granular control. We're building advanced search with boolean operators, date ranges, feed-specific filtering, and saved search workflows that trigger automated actions.

- Complex query builder with AND/OR/NOT logic
- Cross-feed correlation searches
- Scheduled searches with alert triggers
- Exportable search results (CSV, JSON, STIX)

Phase 2: Automation & Intelligence

Q3 2026 through Q1 2027

AI-Powered Threat Scoring

Moving beyond static CVSS scores to dynamic, context-aware threat prioritization. Our AI engine will analyze your specific environment, industry, and technology stack to tell you which threats actually matter to *your* business — not just which ones have the highest generic score.

- Organization-specific risk scoring
- Technology stack mapping for vulnerability relevance
- Industry-vertical threat weighting
- Predicted exploit timeline estimation

Automated Incident Response Playbooks

When a threat is detected, every minute counts. Pre-built and customizable playbooks will guide your team through response steps automatically — or execute them without human intervention for known threat patterns.

- Pre-built playbooks for ransomware, phishing, DDoS, and insider threats
- Custom playbook builder with drag-and-drop workflow
- Automated containment actions (IP blocking, account suspension recommendations)
- Post-incident report generation

Predictive Threat Analytics

Using historical data from our 134+ feeds to identify emerging threat patterns before they become active campaigns. This shifts security from reactive to proactive — knowing what's coming, not just what's already here.

- Trend analysis across ransomware groups and attack vectors
- Seasonal and cyclical attack pattern identification
- Early warning indicators for emerging campaigns
- Monthly predictive threat briefings for subscribers

SIEM & SOC Integration Layer

For businesses that already have security tools in place, STBCS will offer native integrations with popular SIEM platforms and SOC workflows — feeding our intelligence directly into their existing security operations.

- Syslog and CEF output for SIEM ingestion
- Splunk, Elastic, and Microsoft Sentinel integrations
- Webhook-based alert forwarding with custom payloads
- Bi-directional sync for case management

Compliance Automation

Mapping security activities to compliance frameworks shouldn't require a consultant. We're building automated compliance tracking that maps your STBCS usage and security posture directly to NIST CSF, CIS Controls, ISO 27001, SOC 2, and HIPAA requirements.

- Automated evidence collection from platform activity
- Gap analysis with remediation recommendations
- Audit-ready report generation
- Continuous compliance monitoring dashboards

Phase 3: Managed Services & Scale

Q1 2027 through Q4 2027

STBCS Managed Detection & Response (MDR)

For businesses that need more than a platform — they need a team. STBCS MDR will provide 24/7 human-led monitoring, threat hunting, and incident response powered by our platform and delivered by our experienced analysts.

- 24/7 threat monitoring and triage
- Proactive threat hunting campaigns
- Incident response with guaranteed SLAs
- Monthly security posture reviews
- Dedicated security analyst assignment for Enterprise clients

Partner & MSSP Program

Managed Service Providers and IT consultancies serve thousands of SMBs. Our partner program will let them offer STBCS capabilities under their own brand, with multi-tenant management, consolidated billing, and volume pricing.

- White-label platform deployment
- Multi-tenant dashboard for managing client environments
- Consolidated billing and revenue sharing
- Partner certification and training program
- Co-marketing resources and deal registration

Security Awareness Training Platform

The biggest vulnerability in any organization is its people. Our training platform will deliver ongoing, role-based cybersecurity education with simulated attacks and measurable outcomes.

- Role-based training paths (executive, technical, general staff)
- Simulated phishing campaigns with tracking
- Compliance-specific modules (HIPAA, PCI-DSS, SOX)
- Gamified learning with progress dashboards
- Quarterly security culture assessments

Attack Surface Management (ASM) Expansion

Building on our existing attack surface scanning, the expanded ASM module will provide continuous external asset discovery, shadow IT detection, and risk-ranked exposure management.

- Continuous asset discovery across domains, IPs, and cloud services
- Shadow IT and unknown asset detection
- Certificate monitoring and expiration alerting
- Third-party risk scoring for vendor management
- Historical exposure tracking and trend analysis

Phase 4: Industry Leadership

2028 and Beyond

Vertical-Specific Intelligence Packages

Cybersecurity isn't one-size-fits-all. A healthcare clinic faces different threats than a law firm or a manufacturing plant. We're developing industry-specific intelligence packages that deliver the most relevant threats, compliance mapping, and response playbooks for each sector.

- **Healthcare:** HIPAA-focused, medical device vulnerabilities, patient data protection
- **Financial Services:** PCI-DSS alignment, banking trojan tracking, wire fraud detection
- **Legal:** Client confidentiality protection, intellectual property monitoring, legal hold compliance

- **Manufacturing & ICS:** OT/ICS vulnerability tracking, supply chain risk monitoring
- **Retail & E-Commerce:** Payment fraud detection, Magecart tracking, POS security
- **Education:** Student data protection, FERPA compliance, research IP monitoring

Global Threat Intelligence Network

Expanding our feed coverage and establishing regional intelligence partnerships to provide localized threat data for businesses operating across multiple geographies.

- Regional threat feed partnerships (EMEA, APAC, LATAM)
- Multi-language threat intelligence and alerts
- Geopolitical risk indicators for business operations
- Regional regulatory compliance mapping

STBCS API Ecosystem

Opening our platform data to the broader security ecosystem. Developers and security teams will be able to build custom integrations, dashboards, and workflows on top of STBCS intelligence through a comprehensive API marketplace.

- Expanded REST API with full feed access
- GraphQL endpoint for flexible data queries
- SDKs for Python, JavaScript, Go, and PowerShell
- Community-contributed integrations and plugins
- Developer documentation portal and sandbox environment

Cyber Insurance Integration

Partnering with cyber insurance carriers to provide policyholders with discounted STBCS access, and using platform data to help underwriters assess risk more accurately. Businesses using STBCS will benefit from lower premiums based on demonstrated security posture.

- Insurance carrier partnerships for bundled offerings
- Risk posture scoring accepted by partner insurers
- Automated evidence collection for claims support
- Premium discount qualification through platform usage metrics

Investment in Innovation

Our Commitment

AREA	INVESTMENT FOCUS
Threat Intelligence	Expanding from 134 feeds to 200+ with regional and industry-specific sources
AI & Machine Learning	Context-aware scoring, predictive analytics, and automated response
Platform Infrastructure	Geographic redundancy, sub-second API response times, 99.99% uptime target
Professional Services	Growing our analyst team for MDR and incident response coverage
Partner Ecosystem	MSSP enablement, API marketplace, and technology integrations
Security Research	Original threat research, vulnerability disclosure, and community contribution

Current Tiers — Built to Grow With You

As we roll out new capabilities, your subscription grows with you. Here's where each tier stands today, with upcoming features folding into the appropriate plans:

CAPABILITY	FREE	SUPPORTER	PRO	BUSINESS	UNLIMITED
Monthly Price	\$0	\$7.49	\$24.99	\$99.99	\$249.99
Threat Intelligence Dashboard	Full	Full	Full	Full	Full
Security Tools	All 18+	All 18+	All 18+	All 18+	All 18+
Uptime Monitoring	—	3 monitors	10 monitors	25 monitors	Unlimited
Dark Web Monitoring	—	—	5 monitors	15 monitors	Unlimited
API Access (STB-Sync)	—	—	1 key, 60 rpm	5 keys, 120 rpm	10 keys, 300 rpm
Live Threat Lookups	—	—	50/day	200/day	1,000/day
Attack Surface Scans	—	—	—	Included	Included
Threat Reports	—	—	—	Included	Included
SMS Alerts <i>(coming soon)</i>	—	—	—	Included	Included
Live Chat Support <i>(coming soon)</i>	—	—	Standard	Priority	Dedicated
Add-On Marketplace <i>(coming soon)</i>	—	—	Available	Available	Available
MDR Services <i>(2027)</i>	—	—	—	Add-on	Included
AI Threat Scoring <i>(2027)</i>	—	—	Included	Included	Included

All paid tiers currently at 50% introductory pricing.

Why Partner With STBCS Now

Early Adopter Advantages

- 1. Lock in introductory pricing** — current rates are 50% below our planned standard pricing; early subscribers keep their rate
- 2. Shape the roadmap** — our feedback system directly influences feature prioritization; early users have the strongest voice
- 3. Grow with the platform** — as capabilities expand, your subscription automatically includes new features at your tier level
- 4. Established relationship** — when managed services launch, existing customers get priority onboarding and preferred pricing

The Bottom Line

Cybersecurity spending isn't optional anymore — it's a business requirement. The question isn't *whether* to invest in security, but *where* that investment delivers the most value.

STBCS gives you enterprise-grade intelligence today, with a clear path to comprehensive managed security tomorrow — all at a fraction of what traditional solutions cost.

Start with what you need. We'll be ready when you need more.
